

The current Incubito (PTY) Ltd Infrastructure

Konsoleh login :

<https://login.konsoleh.co.za/cas/login>

Login: shaun@incubito.co.za

Password : JAqJDp9SDFAEQ9jn

Xneelo provides the following :

- Mailboxes for Incubito
- Mailboxes for Valinfo
- Mailboxes for Underwriting.life
Underwriting.life DNS is managed by Go Daddy
<https://sso.godaddy.com/login/>
Username : 192698294
Password : arwentroye
All DNS names associated to the Underwriting.life product is also managed by Go Daddy
- All DNS names that is currently used in production environment
- Servers

All DNS registrations has been registered to either registration@incubito.co.za or shaun@incubito.co.za

SSL Certificates is issues by SSL.COM

SSL Certs Email Address :

Username : sslcerts@incubito.co.za

Password : eVrWq:3@QyXymYN@

SSLS USERNAME : sslcerts@incubito.co.za

SSLS PASSWORD : !SSL#incubito

The verification email adress to which the proof of ownership for this domain is sent to is :

admin@iverityapi.co.za - 9vXePtFj7ybvrpPE

admin@incubitoapis.co.za - n55FHNxXJ48ANg5R

admin@iveritygen2.co.za - jG2wABgdPnZLvSsh

admin@cubitsuite.com - xAwTZ6kgGhpjwMzn

admin@cubitinternational.com - acPD6uBnk8gGFRaJ

admin@jsetraining.com - 4xQ\$XskRNac3tChj

Microsoft Azure Portal :

Backup :

Username : incubitorsa@outlook.com

Password : \$u<R<'3MZ3%Ye\`aQ

Weather Server :

IP Address : 102.133.162.159:3389

Username : WeatherService

Password : DqnWdQDpuUvC2aay

Google Drive :

Username : incubitorsa@gmail.com

Password : &[zM6{pV/ALsbR>!

Google Drive is used for :

Archives, and old out - dated projects

APK for testing purposes

Installer packages for ValPrints and iPrints

Github is used for source control :

Username : source@incubito.co.za

Password : d=aZh9-*zMw:Q.8`

Symantec End-Point Protection :

Currently running of the vetting server, the vetting servers acts as the End-Point Protection server as well as the client subscribing to the End-Point server for its policies

<https://symantec.incubito.co.za:9090>

Username : admin

Password : Password : !Symantec#20201

Mailgunn

Username : registration@incubito.co.za

Password : 78GGTysfjgHQC BKd

Was registered to be the mail server provider but never implemented on IVERITY and Valinfo

Current Incubito has got No Developer account with Google

Current Incubito has got an Expired account with Apple

Apple ID for Mac and iPad :

Apple ID Incubito :

Username : appledev@incubito.co.za

Password : !iOSDev#2020

ICAS Apple Developer Account :

Username : jroper@icas.co.za

Password : 2W6zMFkd9meVMV4u

ICAS Google Developer Account :
Username : icasmobile@gmail.com
Password : !icasmobile#
Server Currently hosted at Xneelo

Aviation Server - 156.38.162.154

Credentials :
Username : ARES\Administrator
Password : Vwj[3k8WKs8c*`=Y

SQL Backup Master
This software is used to make a backup of the database 12:00
Database Name : Cubit OFP
Local Folder : C:\SQL Databases
Azure transfers the backup at : 01:00 am

NOTAMS
This is a windows service that checks the mailbox notams@incubito.co.za every 2 hours and decodes and saves the decoded data into
C:\OFP Externals\Notams\Decoded

KEOPS
This is a windows task set to run every morning at 03:30 to download the daily flight schedule from SAX FTP.
If this task does not run for any reason please run
C:\OFP Externals\Software\KEOPS Console\KEOPSConsole.exe

Weather
If for any reason the Weather server did not provide weather to this server, you may manually run weather here
C:\Program Files (x86)\Cubit OFP\Weather\GRIB2\AvPlanWx.Console.exe

General Server Tips:
Users cannot connect via RDP?
Please go to the Server Manager, Remote Desktop Services, Collections, Basic Applications. Under Connections you need to first log off and then disconnect users that is currently complaining about there connection. Once disconnected user may resume their RDP connection.

Vetting, Cubitsuite, JSE Training, Underwriting.life, CrimChecks Server
129.232.193.218

Credentials :
Username : VALKYRIE\Administrator
Password : vDrV2pw3

SQL Backup Master

This software is used to make a backup of the database 12:15

Database Names :

- IVERITY
- VALINFO
- EMPLOYINSIGHT
- G4S
- SUPERNOVA
- MANTIS

Local Folder : C:\SQL Databases

Azure transfers the backup at : 01:00 am

Currently there exists no backups for Cubitsuite, CubitInternational, JSE Training

SQL 2012 Contains all Vetting Databases

SQL 2014 Contains Cubitsuite, CubitInternational, JSE Training, ZapAnApp

All Web application is at : C:\inetpub\wwwroot

All Restfull APIs is at : C:\inetpub\WebServices

Prints Application:

Application that is used for taking the individuals fingerprints and transmitting them to the server.

All Print packages captured by Prints Application is :

C:\CrimChecks\ *Entity Name* \Prints

All Photos captured by Prints Application is :

C:\CrimChecks\ *Entity Name* \Photos

Prints Windows Service:

A windows service that makes use of a third party SDK to transmit the package to Afiswitch, the provider who checks and interfaces with SAPS.

This is a multi-threaded service.

Prints transmission thread runs every 15 min

SAPS69 Download thread runs every 1 hour.

SAPS69 Thread check a mailboxes at the mentioned time, downloads the PDF, encrypts the PDF and saved the encrypted file and discards the RAW file.

All SAPS69 is stored at : C:\CrimChecks\ *Entity Name* \SAPS69

All Logs are stored at : C:\CrimChecks\ *Entity Name* \Logs

There logs are for the files being uploaded from the Prints Application

*Entity Name means company name like, ICAS and ValInfo

*ValInfo Service Name ValPrintProcessor

Location : C:\Program Files (x86)\VPS

*ICAS Service Name MorphoService

C:\Program Files (x86)\iPrintService

General Prints Transmission Tips :

If a individual with a Passport does not want to transmit?

Please check that in the Candidates table the Passport Column and the Identifier Column is exactly the same. The Prints Windows services uses the identifier field to transmit the package to, Afiswitch.

If a prints has been submitted, but cannot be retrieved with error message,
Invalid Application - Host Reference Nr?

Sometimes the individual that captures the print package captures the Identifier (Passport/ID Number wrong), they only realize that after transmission of the print package has occurred. They go an update the individual's Identifier on the web application, and now when the new Identifier is sent to Afiswitch to retrieve the criminal check result they are unable to retrieve. Identifier and Host Reference Nr are bound together when the prints package has been transmitted successfully

Cubitsuite Elements are stored in C:\AppsBuilder\Creator\Elements

Cubitsuite DataPrivacy etc stored in C:\AppsBuilder\Creator\Externals

Cubitsuite Preview of PDF files stored in C:\AppsBuilder\Creator\Preview

Cubitsuite Library Items files stored in C:\AppsBuilder\Creator\Library

ClientRequestService

This service is used to send off the Callback and Report Absence in an XML attachment to ICAS, location : C:\Program Files (x86)\CRS

Service Name : ClientRequestService

JSE Training Elements are stored in C:\AppsBuilder\JSE Training\Elements

JSE Training DataPrivacy etc stored in C:\AppsBuilder\JSE Training\Externals

JSE Training Preview of PDF files stored in C:\AppsBuilder\JSE Training\Preview

JSE Training Library Items files stored in C:\AppsBuilder\Training\Library

Azure Servers :

Weather Server - 102.133.162.159:3389

A console application run every 6 hours to download RAW weather from a FTP server from WeatherSA and converts them into a format that Cubit OFP understands.

The 6 hours schedule is a windows task that runs a batch file.

The contents of the batch file is the console application, and then a script to transfer the weather files to their destination, and cleanup afterwards

- 01:30
- 07:30
- 13:30
- 18:30

The weather is transferred to :

- 156.38.162.154:32687 - SFTP - Incubito Server
- 196.13.106.85:2242 - SFTP - Comair Server

The location of the batch file is : C:\Users\WeatherService\WeatherTransfer.bat

The location of the console file in the batch file

C:\Program Files (x86)\Cubit OFP\Weather\GRIB2
